CFE DUST FILTER DATA SHEET

CFE DUST FILTER

DESCRIPTION

CFE and CFE W3 are dust filters for large airflows.

The CFE and CFE W3 are suitable for filtration of dry particles, such as dust and welding fumes, in the mechanical industry. For airflows from $1,000 \, \text{m}^3\text{/h}$ to $12,000 \, \text{m}^3\text{/h}$. For larger airflows, multiple modules can be installed in parallel.

Two versions of the filter are available:

- **W**3
- Standard filter cartridge designed for welding fumes from steel with a chrome/nickel content of less than 30%
- Certified filter for filtration of welding fumes from stainless steel.

On-demand cleaning.

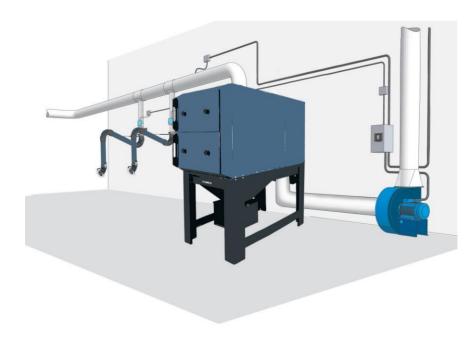

- · The filter is supplied fully assembled from the factory.
- · Filter replacement can take place without any contact with the dirty filter.

Monitoring system via a mobile app on your smartphone is available as an option.

PRINCIPLE DIAGRAM FOR CFE/CFE W3

PRX local extractors are used to evacuate the welding fumes. To conserve energy and extend the life time of the filter, the extractors are equipped with automatic dampers that close when the extractors are not in use.

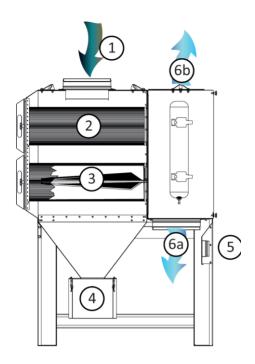

Particles are filtered via a CFE/CFE W3 type filter in accordance with standard EN ISO 15012-1, W2 or W3.

The speed of a FB type fan is controlled via a ST 300 pressure sensor and an SFC frequency converter.

The filter can be equipped with a monitoring system that connects to an app on your smartphone to monitor the function of the filter.

HOW IT WORKS

- Polluted air enters the filter through the top inlet. The dust naturally falls through the filter.
- The filter cartridge removes dust with a high separating degree. The horizontal placement of the cartridges facilitates accessibility during service. Filter exchange can be done without contact to the dirty filter.
- A time controlled diaphragm valve provides high pressure air pulses that dislodge dust particles that collect on the cartridge. A specially designed deflector is used for optimal cleaning of the entire cartridge.
- 4. Dust particles dislodged from the filter cartridges accumulate in the hopper and are carried down to the dust collector bin.
- Controls for on demand cleaning. Online cleaning means cleaning during operation. Offline cleaning cleans when the plant is not in operation.
- 6. The clean, filtered air is evacuated through the air outlet. The outlet connector as standard downward. 6a but can also be delivered with the connection upwards. Outlet direction can also be changed on site.

AUTOMATIC SYSTEM WITH ON-DEMAND CLEANING

ON-DEMAND CLEANING

Controlled by the pressure drop across the filter cartridges. The pressure drop starts a cyclical cleaning of the cartridges when the set value is reached.

ONLINE CLEANING

To ensure stable airflow, the filter is cleaned during operation (so-called online cleaning). When the fan stops for breaks or at the end of the working day, the filter is cleaned (so-called offline cleaning) to allow all lightweight particles to fall into the dust collector.

CONTROL UNIT.

The status of the cartridges can be checked by reading the digital control unit on the filter or by installing the external manometer, CFE M. For remote monitoring on your smart phone or PC, a separate device is available as an accessory.

W3-CERTIFIED FILTERS

(CFE W3) must always be monitored using a CFE BW3 warning light placed in a highly visible location indoors.

PROGRAMMABLE CONTROL UNIT

For programming e.g. start-up pressure for cleaning and number of cleaning cycles after the system has stopped.

ISOLATING SWITCH

For electrical connection of the control unit.

COMPRESSED AIR VALVE.

For setting desired cleaning pressure and fitted with locking shut-off valve. The evacuation valve for the compressed air tank is separate.

THE CONTROLS ARE ALREADY CONNECTED

Only compressed air and single phase (230 V) electrical connection are required.

CERTIFICATION

According to standard EN ISO 15012-1 Evacuating the harmful welding fumes directly at the source, before they spread into the premises, is the most effective way of creating a healthy and safe working environment.

The level of harmful and carcinogenic particles in the welding fumes is rising at the same rate as the increase in the percentage of chrome/nickel(Cr Ni) alloys in the welding wire. This means that systems for welding fume extraction and filtration are subject to more stringent requirements.

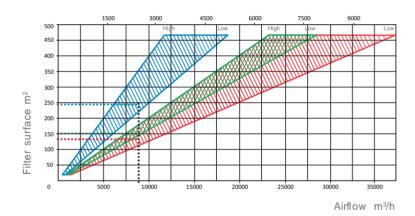

The international standard EN ISO 15012-1 specifies the requirements for filtering welding fume particles in the following categories.

Filtration of welding fumes from steel with a chrome/nickel (Cr Ni) content equal to or greater than 30% must have certified separation of more than 99%.

W2 Filtration of welding fumes from steel with a chrome/nickel (Cr Ni) content lower than 30% must have separation of more than 98%.

FLOW AND PRESSURE DROP DIAGRAM

The airflow for each filter is calculated on the basis of what is known about the nature of the dust particles, the amount of dust in the air and how intensively the system is being used. Based on experience, the following filter loads are recommended.

Fumes from plasma, gas and laser cutting. Filter load 25-40 m³/h/m²

Fumes from welding (production).

Dust from fine dust and powder

Filter load 50-60 m³/h/m²

Fumes from welding (training, repair work). Dust from metalwork and stonework. Filter load 50–80 m³/h/m²

The pressure drop of the filter in clean cartridges is 250-500 Pa depending on the volume of air.

Recommended pressure drop at which the filter should be replaced: 1500 Pa

Maximum pressure drop over the cartridges: 1800 Pa

FILTER CARTRIDGES

Standard filter CFS 195/CFS 195W3 is recommended in normal circumstances. For demanding applications (gas and plasma cutting), the high-quality filter CF 168PH is recommended.

| MODEL | CFS 195 | CFS 195P | CF 168PH | CFS 195W3 📵 | CF 211W3 🐵 |
|--|--|---|--|--|--|
| Description | Standard filter. Used for welding fumes and for dust from stone and metal. | Standard filter. Used for welding fumes and for dust from stone and metal. The robust polyester fiber provides longer service life. Particularly suitable for frequent cleaning and long operating hours. | A high-quality filter for demanding applications, e.g. gas and plasma cutting. Also suitable for demanding dust filtration with high concentrations of dust. | Standard filter. Used for welding fumes and for dust from stone and metal. The PTFE membrane makes the filter suitable for slightly damp or sticky material. | A high-quality filter for demanding applications, e.g. gas and plasma cutting. Also suitable for demanding dust filtration with high concentrations of dust. |
| Material: | Polyester - standard | Polyester - BICO | Polyester | Polyester - BICO with PTFE membrane. | Polyester, coated with nanofibre. |
| Type: | Pleated filter material for optimum efficiency. | Pleated filter material for optimum efficiency. | Corrugated filter material for maximum efficiency at the lowest pressure drop. | Pleated filter material for optimum efficiency. | Corrugated filter material for maximum efficiency at the lowest pressure drop. |
| Max temp. process air: | 60°C | 60°C | 70°C | 60°C | 60°C |
| Filter material's degree of penetration according to EN-60335-2-69 | 0.06% | 0.06% | 0.06% | 0.01% | 0.02% |
| Dust class: | M(BIA) | M(BIA) | M(BIA) | M(BIA) | M(BIA) |
| Active filter area: | 19.5 m² | 19.5 m² | 16.8 m² | 19.5 m² | 21.1 m ² |

We always recommend to use pre-coating to extend the life-time of the filter cartridges.

CAPACITY RANGE

CFE-4W3 ^W

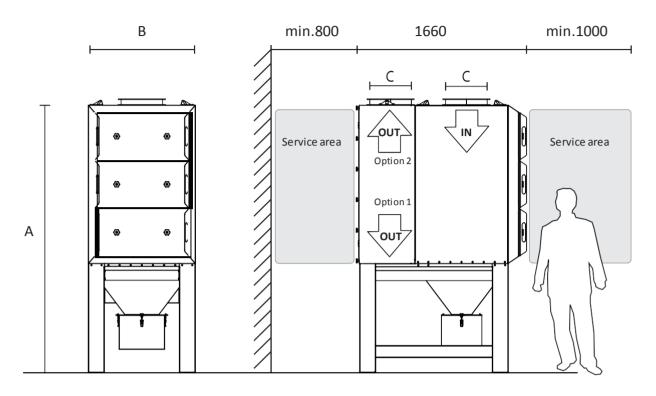

CFE-6W3 W

CFE-8 CFE-8W3

SIZES AND DIMENSIONS

| DESIGNATION | NUMBER OF CARTRIDGES | A (mm) | B (mm) | C (mm) | WEIGHT (KG) |
|-------------|-------------------------|--------|--------|--------|-------------|
| CFE 2 | 2 | 2140 | 550 | Ø250 | 270 |
| CFE 4 | 4 | 2180 | 1070 | Ø400 | 350 |
| CFE 6 | 6 | 2650 | 1070 | Ø400 | 520 |
| CFE 8 | 8 | 3270 | 1070 | Ø400 | 720 |

| DESIGNATION | CARTRIDGES | FILTER AREA (M²) | | | |
|-------------|------------|------------------|----------|-----------|----------|
| | | CFS 195 | CF 168PH | CFS 195W3 | CF 211W3 |
| CFE 2 | 2 | 39 | 33.6 | 39 | 42.2 |

ACCESSORIES

CFE BW3

Flashing orange warning light to indicate that the filter's maximum load has been reached. Supplied as a kit containing a warning light and relay box. Position in a highly visible location indoors. Included as standard for W3 type filter. Delivered as standard with CFEW3.

CFE RW3

Bayonet ring for contactless replacement of filter cartridges. Supplied with rubber bands for the plastic bag.

CFE PCW3

Plastic bag for contactless replacement of filter cartridges.

CFE PSW3

Plastic bag for contactless replacement of filter cartridges.

CF PRE-COAT/S AND CF PRE-COAT/H

Pre-coating is recommended to extend the life-time of the filter cartridges.

CF PRECOAT/S, recommended amount is 1 kg per standard cartridge filter CF PRECOAT/H, recommended amount is 1/6 kg per high quality cartridge filter

CF PRE-COAT/S AND CF PRE-COAT/H

Analoge pressure gauge for easy overview of filter load

CFE HS

Set of wheels for easy replacement of dust collector. Fits CFE 4, 6 and 8.

CFT-400

To reduce the risk of sparks from welding or cutting reaching the filter cartridges, external spark trap CFT-400 is recommended.

To achieve the best effect, spark trap CFT-400 should be mounted in a horizontal position. The duct before the spark trap must have a straight part which is at least 10×10^{-2} x the duct diameter.

Recommended velocity: 8 - 25 m/s.

Pressure drop at 15m/s: 360 Pa

Weight: 7.3 kg

The spark trap is available in other sizes upon request.

TECHNICAL DATA

| MODEL | CFS 195 |
|---------------------|--|
| CFE filter | Maximum negative pressure for filter housing: 5 kPa Dust collector volume: 55L |
| Material | Module: Casing and frame made from powder-coated sheet steel |
| Compressed air | Air consumption: Min 0.24m³/min. Max. pressure: 7.0 bar Normal working pressure: 5.0 bar |
| Automated functions | Pulse time: 0.08 s Ambient temperature: -20 to +50°C Voltage: 110 V / 230 V ~ IN Valve voltage: 24 V ~ IN Protection class: IP 54 |
| Form of delivery | Filters are always delivered fully assembled. Each module is equipped with lifting eyebolts for easy handling. |
| Form of delivery | The CFE filter is designed to be assembled before the fan. The filter must be weather-proofed with a built-in or lean-to roof. Connection should be made to a circular, pressure-tight duct. |
| Air volume filter | Adjustments can be made using pressure controls or flow controls. |
| Compressed air | Air quality: Clean and oil-free air, free from condensation at the current working temperature. |
